

## Results specification:

The project aimed at achieving two functionalities mainly

1. To lock/ unlock machine automatically.
2. To transfer data(music) according to the user location.

Both the functionalities have been successfully achieved. Their screen shots are show here. We should be able to give a more accurate description of the working through a live demonstration.

By carrying out we were able to:

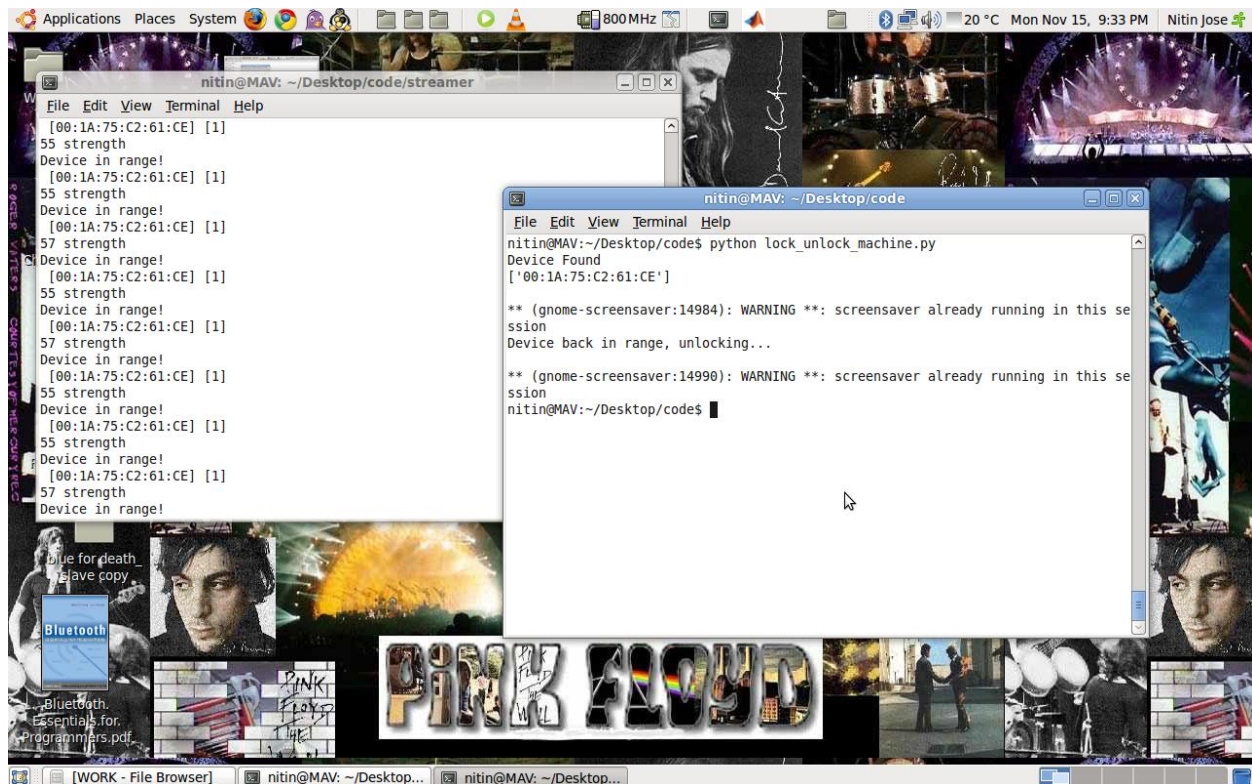

Understand the Bluetooth protocol stack

Learn how to build a Bluetooth based applicaton

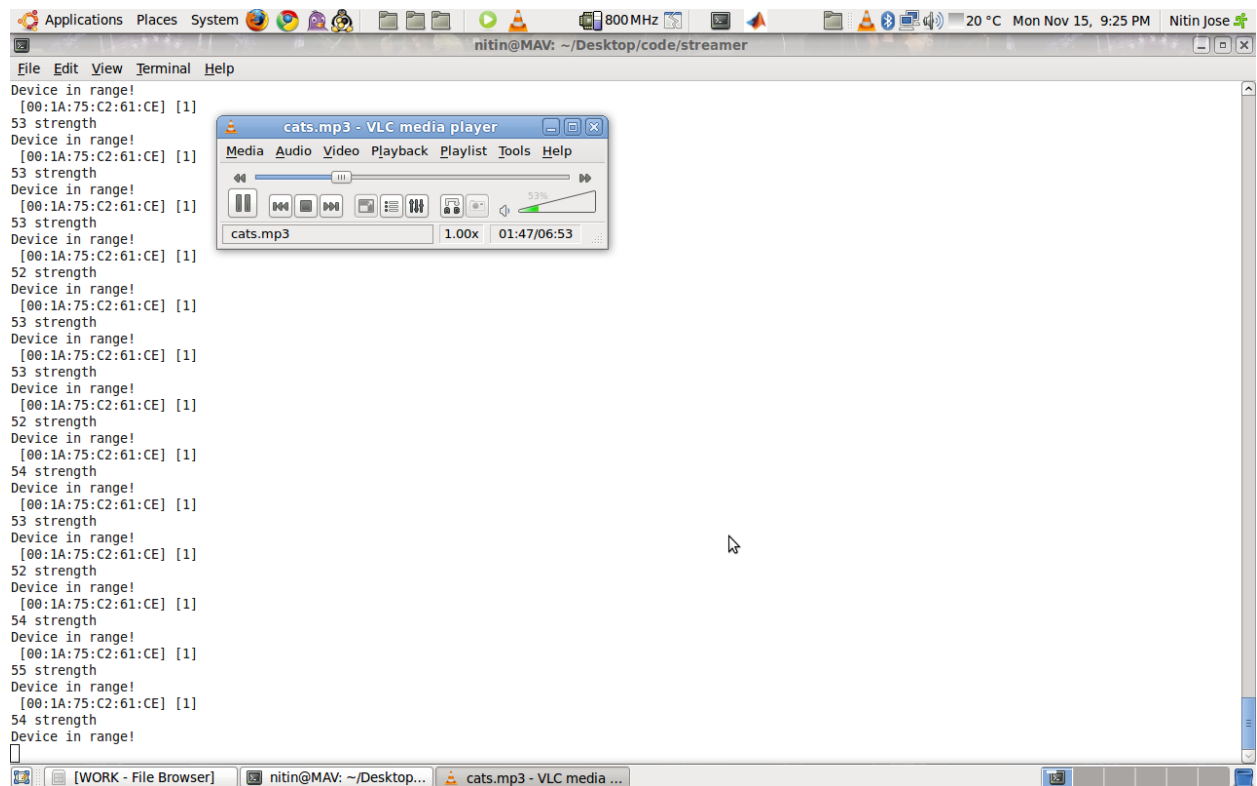

Understand multimedia streaming

Understand the remote control interface of media players like vlc

## Screenshots:

Screen shot of locking/unlocking machine application successfully running

Screen shot of the streaming of music application successfully running.
